The following recommendations are to assist in the selection of gasket compounds to suit particular applications. The data furnished is based upon the best information available and data supplied by producers of basic copolymer materials and leading rubber molders and manufacturers. This information is to be used as a guide and is based on average conditions. Many other factors in actual service conditions must be considered in making a final selection.

Selecting the proper elastomeric compound for a specific application is largely a matter of making the best possible match between compound capabilities and service conditions. Sometimes compromises must be made, but usually a compound can be identified that meets all the specifications. For specific application conditions and selection assistance, contact Star Pipe Products.
